flatiron ASSIST™

Our oncology-specific clinical decision support tool

Flatiron Assist™ arms physicians with evidence-based medicine, innovative treatment options, and clinical research at the point of care via an EHR-integrated, intuitive clinical decision support tool.

Elevate clinical care

- Stay up to date on evolving treatment guidelines with innovative treatment options, relevant clinical trials, and the latest NCCN guidelines surfaced at the point of care

- Use biomarker data to identify the best precision cancer treatments for your patients

- Quickly find and order the right treatments through a seamless EHR-embedded workflow

- Reduce the amount of time patients have to wait between diagnosis and treatment

90%+
overall NCCN concordance

80%
clinician adoption after one year

75+
updates of NCCN guidelines in 2022

Power instinctive workflows

- Reduce variation in care by prioritizing the same preferred regimens across clinicians and locations

- Expedite prior authorization approval and reduce denials by capturing concordance and other payer-required data elements

- Leverage NCCN and payer-preferred concordance data to excel in value-based care programs and strategic payer negotiations

- Use treatment pattern data to enable more efficient bulk ordering of drugs

10%
reduction in denial rate

2 day
improvement in time to prior authorization

58%
reduction in unique regimens ordered across cancer centers
