- Jennifer McCaffery (lay)
- Hayley Hall (lay)
- Sonia Patton (patient)
- Trishna Bharadia (patient)
- Yanrong Jiang (clinical)

Conflicts of interest

No conflicts declared by panel

Decision outcome

Approved

Summary of discussion

- Lay summary provides strong explanation of disease background and unmet need.
- Good and concise description of data that will be analysed, type of analysis, objectives and outputs.
- Clear distinction between this data access request (fit-for-purpose assessment) and potential downstream analyses to support a wider set of use cases.
- Clear that J&J will only receive outputs of Flatiron's analysis and no access to data.
- The panel raised several comments on other aspects of the application including:
 - The content could have been written in more lay terms.
 - Further detail could have been provided on what patient demographic and clinical characteristics would be analysed.
 - Overall the panel felt this approach of assessing the database was likely to lead to a more focused future data access request from J&J.
