

Research Transparency Panel Meeting Summary

London School of Hygiene and Tropical Medicine

10th December 2024

14:45–15:45

Data Access Proposal Request

Flatiron Health UK RWD Products

- Breast Cancer

Attendees

FLATIRON HEALTH UK

- Adam Manhi (chair)
- Emma Salib (programme manager)

RESEARCH TRANSPARENCY PANEL

- Kaeden Bunting (lay)
- Hayley Hall (lay)
- Sonia Patton (patient)
- Thomas Smith (patient)
- Shira Peleg-Hasson (clinical)

Note

The applicant is a Flatiron employee who is also completing a part-time Masters at LSHTM.

Conflicts of interest

No conflicts declared by panel

Decision outcome

Approved

Summary of discussion

- Lay summary is clear, outlining importance of next-generation sequencing (NGS) and its potential to enhance patient outcomes by identifying factors that result in patients not having NGS tests.
- Overall a concise and well-structured application. The timeline reflects a well-organised approach.
- The panel raised several comments on other aspects of the application including:
 - Application could have been written in more lay terms and this should be a future consideration for the applicant as this research progresses.

- Application could have elaborated more on planned work and benefit [e.g. why a regression model was chosen; providing further context on the potential patient benefit]
